## ADJUSTMENT

Customer can specify AT series with dip switch in optional code (-DP) for change of input and output range to save stock.
$\triangle$ Recalibration is recommended after change range.

## INSTALLATION

The converter should be installed in a location that dose not exceed the maximum operating temperature and provides good air circulation

## CONNECTION DIAGRAM

The converter has been designed pluggable terminal blocks
Rated voltage: 300 V
Rated current: 12A
Solid wire (AWG): 28~12 Wire strip length: 7~8mm
Screw: M2.5
Torque: $5.0 \mathrm{Kg}-\mathrm{cm}$

Auxiliary power connection - Terminal block 1
Please check the voltage of power supplied first, and then connect to the specified terminals $\circ$ the meter be protected by a fuse or circuit breaker 1.

The connection is maybe change. Please refer to the connection on the label of products

Input signal - Terminal block 2
The converter can be input and output mA and V that depends on the difference terminals wiring

AT-VA(AC, DC Voltage/Current)

AT-PR(0~10V/4~20 mA)

AT-TR(Pt100 $)$

AT-TC(Thermocouple)

Output signal 1 \& 2 - Terminal block 3 \& 4
OPTION "DP" Function, The converter can be output mA and V that depends on the terminals wiring. (by Dip-switch)

Excitation supply - Terminal block 4
Output 2 can be specified one of analogue and excitation supply
